-

To prepare for a successful screening, please remember to:

1. Fast for at least nine (9) hours; this includes all food and drinks except for water. Failure to properly fast may result in inaccurate blood test results.
2. Do not skip or alter your medication schedule without first speaking to your physician. (If you are diabetic, pregnant or have any other medical condition, please consult your physician prior to fasting.)
3. Drink plenty of water the morning prior to the screening. Drinking at least two (2) glasses of water prior to you screening will allow for an easier blood draw.
4. Wear light clothing to the screening. As weight and other body measurements will be performed, light-non bulky clothing will assist with more accurate readings.
5. Arrive five (5) minutes prior to your screening time. Relaxing a few minutes prior to your screening will help your blood pressure to return back to a resting level.
